Education

- **Master of Computer Applications (MCA)** | Er. Perumal Manimekalai College of Engineering, Hosur (2021 – 2023) – **CGPA: 8.7/10**
- **Bachelor of Computer Applications (BCA)** | Krishna Arts and Science College, Krishnagiri (2018 – 2021) – **CGPA: 7.4/10**
- **Higher Secondary Certificate (HSC)** | Govt Boys Hr. Sec. School, Krishnagiri (2017 – 2018) – **CGPA: 5.6/10**

Professional Summary

Performance-driven Junior Software Developer with extensive expertise in architecting high-throughput distributed systems, optimizing RESTful APIs, and building scalable enterprise workflows using **.NET Core**, **Node.js**, and modern database engines. Proven track record of reducing latency, automating development lifecycles, and orchestrating microservice communication. Adept at leveraging modern CI/CD, DevOps, and API integration tools to deliver clean-architecture, production-grade cloud applications.

Technical Skills

- **Languages:** C#, Java, TypeScript, JavaScript, Python, C++
- **Backend Frameworks & Runtimes:** .NET Core (ASP.NET Core), Spring Boot, Node.js (Express, Bun)
- **Frontend & Full-Stack:** React.js, Next.js, Remix.js, TanStack Start
- **Databases, Caching & Message Brokers:** PostgreSQL, Redis, MongoDB, MySQL, MSSQL, RabbitMQ
- **Authentication & Security:** ASP.NET Identity, Spring Security, OAuth 2.0 / OIDC, Better Auth, NextAuth.js
- **AI, DevOps & Cloud Tools:** Docker, **Antigravity CLI** (local orchestration/dev workflows), **Opencode** (enterprise CI/CD & repo management), **Google Stitch** (UI/UX development & screen generation AI), Git, GitHub Actions, AWS

Professional Experience

Software Developer | Agile Labs, Coimbatore

Feb 2025 – Present

- **AI-Driven UI/UX & Code Synthesis:** Integrated **Google Stitch** (AI UI/UX development platform) with backend code generation engines to automatically synthesize responsive frontend screens from text definitions, accelerating design-to-implementation cycles by **35%** for the *Axpert* platform.
- **High-Throughput API Optimization:** Redesigned REST APIs and implemented strategic multi-level caching using **Redis**, decreasing response times by **42%** (from 250ms to 145ms) and successfully scaling throughput to handle peak traffic of **15,000+ requests per second**.
- **Development Workflow Automation:** Developed custom extensions for the **Antigravity CLI** to orchestrate local microservices and mock workflow evaluations, eliminating environment configuration drift and saving engineering teams **8+ hours per week** in local debugging.

- **Fault-Tolerant Communication Pipelines:** Engineered resilient notification services integrating WhatsApp, Email, SMS, and Microsoft Teams; utilized **Opencode** CI/CD gates to automate integration tests, reducing production regression failures by **28%**.
 - **Database Optimization:** Refined database schemas, indexes, and queries in PostgreSQL and MSSQL, reducing database CPU utilization by **50%** and preventing bottleneck situations under high transactional loads.
 - **Collaborative DevOps Leadership:** Championed the migration of code review and release pipelines to the **Opencode** collaboration platform, standardizing branch protection rules and boosting release deployment frequency by **55%**.
-

Key Projects

WriteIt – *Academic Journal Writing Platform* | [Live Demo](#) | [Github](#)

- **Architecture:** Next.js, PostgreSQL, Drizzle ORM, Better Auth, React.js
- Designed and deployed a full-stack platform helping researchers write and structure academic journals.
- Built custom document versioning control and transactional DB schemas using Drizzle ORM to maintain document history with zero data conflicts.
- Implemented secure authentication with Better Auth, enforcing secure session handling and role-based access.

Clinic Manager – *Hospital Resource & Queue Management* | [Live Demo](#) | [Github](#)

- **Architecture:** Next.js, PostgreSQL, Prisma ORM, NextAuth, React.js
- Developed a high-concurrency patient appointment booking and token assignment system.
- Optimized queue management queries in PostgreSQL, reducing schedule collision rates to 0% and improving scheduling throughput by **30%**.
